

Consolidated Container Company Plans to Ship 200 Million Eco-Friendly Dura-Lite® Bottles by Year's End

Atlanta—The award-winning¹ family of Dura-Lite® containers, co-developed by Consolidated Container Company (CCC) and Milacron's (NYSE: MCRN) Uniloy® product brand, continues to impress customers, consumers, and industry experts since its launch in 2016. Dura-Lite® containers are available in gallon, half-gallon, and quart sizes, presenting customers the opportunity to leverage a matched set of bottles with similar aesthetic features and enhanced performance characteristics.

Dura-Lite® bottles are designed to use between 10% and 25% less plastic than comparable traditional designs – all while meeting or exceeding the key performance attributes of those traditional designs. “By using less plastic in a distinctive design package, Dura-Lite® can help our customers realize supply chain savings, meet sustainability targets, and refresh the look and feel of their products,” said Alex Bernhardt, Senior Vice President of Strategy & Commercial Excellence at CCC. “Our investments in compelling, value-based solutions such as Dura-Lite® have started to make waves across the industry and help solidify CCC's position as a packaging solutions provider of choice for our customers.”

Robert Spagnoli, Global Product Manager, Molds and Tooling, Uniloy, said, “The success of the Dura-Lite® container is a direct result of Milacron and CCC's combined hard work and mutual respect for each other's talents and experience.”

Dura-Lite® bottles are compatible with multiple neck finishes and have footprints specifically designed to work well in existing dairy, water, and beverage fill lines and downstream supply chains with minimal need for upgrades or capital investment.

To date, CCC has shipped nearly 30 million Dura-Lite® bottles to customers throughout the United States—including for major national beverage manufacturers—and CCC plans to ship over 200 million more bottles by year's end. Throughout 2016, CCC installed Dura-Lite® molds across its national network of manufacturing facilities to support accelerating customer demand for these innovative packages. “The benefits of these designs coupled with the breadth of our national footprint creates a powerful value proposition for our customers, who are looking for innovation, savings, and supply chain security,” said Patrick Keese, Senior Vice President and General Manager of CCC's Beverage business. “I continue to be delighted by the consistently positive customer feedback we receive around our Dura-Lite® program.”

CCC co-developed the Dura-Lite® family of containers with Milacron's Uniloy® product brand, utilizing Uniloy's® expertise in molds and machining combined with CCC's Studio PKG™ design capabilities and in-depth research with customers and consumers. Due to the nature of the exclusivity agreement between CCC and Milacron, Dura-Lite® containers are available only through CCC.
